www.inofast.com

Inofast Manufacturing is a recognized leader in supplying **LEVEL ONE** military fasteners to the Navy, its prime sub-contractors, and the supporting industrial base. Inofast also enjoys an excellent reputation for quality and on-time delivery performance. We frequently become the “vendor of choice” for many of our customers when they reduce their vendor base.

Machined specials in accordance with customer prints are also a large part of our business. Our advanced CNC machining centers allow us to produce parts in quantities ranging from 1 to 1,000 with both speed and accuracy. With over 25 years of manufacturing experience, we can confidently produce any standard or custom product in any common or exotic material. As a full-service supplier, Inofast can procure certified raw material or process customer-supplied material.

Quality of parts **AND** documentation are the highest priorities at Inofast. When producing quality-focused parts, manufacturing excellence is only half of the equation. Regardless of physical features, a critical application component is only as good as the documentation that backs it up. At Inofast Manufacturing, our knowledge of military, federal, and industry specifications sets us apart from the pack. Using a state-of-the-art information system, we ensure that your part's dimensions are precise, the material chemistry is in conformance, the physical requirements are met, the marking is accurate, the inspection sampling plan is satisfied, the testing criteria is followed, and the post-machining process procedures are executed properly. Finally, all of the data and documentation collected throughout the production process is presented to you in a secured, easy to understand, electronic certification package.

Markets Served
